

编译原理第十次作业参考答案

练习 6.2.1

0.1 表达式 1: $f = i \times c$

```
t1 = (int) c          // widen char to int
t2 = i * t1
t3 = (float) t2       // widen int to float
f = t3
```

0.2 表达式 2: $y = (i + f) - (s + c)$

```
/* 计算 (i + f) */
t1 = (float) i      // widen int to float
t2 = t1 + f

/* 计算 (s + c) */
t3 = (short) c      // widen char to short
t4 = s + t3

/* 执行减法 (float - short) */
t5 = (float) t4      // widen short to float
t6 = t2 - t5

/* 最终赋值 (assign float to double) */
t7 = (double) t6     // widen float to double
y = t7
```

101	goto _
102	if c == d goto _
103	goto 104
104	if e == f goto _
105	goto _
